SCIPP International Releases Modular Security Awareness Course for Web Application Developers

Interactive Modules Cover Most Common Overlooked Application Errors and Vulnerabilities

Vienna, VA, March 30, 2016—[SCIPP International](#) (SCIPP), has re-launched its highly acclaimed security awareness course for web application developers. The previous four-hour Secure Web Application Development Awareness (SWADA) course has been restructured into 12 topic-specific modules, to provide greater flexibility and convenience for web application developers, designers, supervisors and anyone who manages and maintains information security.

Web applications have primarily focused on features and functionality. To reduce the frequency and scope of data breaches, developers must create secure source code in developing, modifying and maintaining applications. Security experts agree that application security is the area responsible for the majority of cyber attacks, and an area in which developers are poorly trained.

The animated, interactive course still addresses the most critical issues for data security, integrity and compliance:

- Open Web Application Security Project (OWASP) Top 10 Vulnerabilities
- CWE/SANS Institute (CWE/SANS) 25 Top Programming Errors
- Web Application Security Consortium (WASC) Threat Classification Project
- Best practices for secure coding throughout the software development lifecycle

Each module includes a quiz to ensure learning and a certificate of training at completion to demonstrate compliance.

SCIPP was the first security awareness company in the world to receive ANSI accreditation for its security awareness certificate programs for end users and application developers. An ANSI-accredited certificate program enables companies to demonstrate they implemented a quality security awareness program.

About SCIPP International

SCIPP International™ is a global non-profit organization focused on security awareness problems where they are most prevalent – at the human level. Based in Vienna, Virginia, USA, SCIPP courses address information security risks and compliance issues through its internationally-recognized awareness courses for end users and web application developers. SCIPP's core portfolio meets a variety of industry standards, including payment card industry data security standards (PCI-DSS). More information is available at <http://www.SCIPPinternational.org>.
